JOURNAL OF CRYSTAL GROWTH

Subject index

Alloys
– of binary mixture 134
Aluminum
– gallium arsenide 231, 344
Antimony
– organic 247
Apparatus
– for melt growth
– – by floating zone method
– – – in microgravity
– – – – of yttrium barium cuprate 302
– – by zone melting
– – – of gallium indium antimonide 165
– for thin film growth
– – by vapor phase epitaxy
– – – through metalorganic chemical vapor deposition
– – – – using improved gas switching
– – – – – of aluminum gallium arsenide 344
– – – – using remote plasma assistance
– – – – – of indium phosphide 15
– for vapor growth
– – by evaporation and condensation
– – – of cadmium telluride 27
– for miscellaneous purposes
– – rotational electromagnetic stirring of Czochralski melt 351

Barium
– oxide–iron(III) oxide 47
Beryllium
– aluminate 327
Bismuth
– germanate 67
– strontium calcium cuprate 86
– strontium calcium cuprate, rare earth substituted 81
– titanium oxide 319

Cadmium
– mercury telluride 6, 247
– telluride 27, 259
Calcium
– strontium gallate niobate 54
Cellular growth
– of binary mixture 113
Chrysoberyl 327
Clusters
– of glycine 104
– of sodium chloride 104
Cobalt 363
Computer simulation
– of bismuth germanate growth 67
– of convection and transport mechanism 266
– of garnets, Czochralski growth 147
– of silicon, Czochralski growth 197
– of surface morphology 211
Constitutional supercooling
– of calcium strontium gallate niobate 54
Convection 67, 134, 158, 266, 372
Copper 351

Dendritic growth
– of binary alloy 134
Device characterization
– diodes 172, 251
– electronic materials 238, 251
– heterojunction 238
– lasers 309, 372
– quantum wells 344
Diffusional control
– of binary mixture 113
– of cluster 104
Diodes, see Device characterization
Dissolution
– of oxygen in silicon melt 357

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 6, 27, 37, 211

Forsterite 327

Gadolinium
– gallium garnet 147
Gallium
– antimonide 206
– arsenide 231, 344

– indium antimonide 165
Garnets 147, 372
Germanium 351
– silicon 1
Glycine 104

Habit modification
– of sodium chlorate 336
Heat flow control
– of Czochralski growth 271, 286
– of garnets, Czochralski growth 147
Heterojunction, see Device characterization
Hydrodynamics, see Convection

Indium
– gallium arsenide 238
– gallium arsenide phosphide 251
– phosphide 15, 19

Kinetics
– of growth 19, 37, 47, 89, 95, 113, 120, 129, 179, 231, 332, 336
– of interface control 47, 113
– of nucleation 120

Lasers, see Device characterization
Lasers, crystals for
– garnets 372
– lead tin selenide 172
– magnesium silicate 327
– organic material 309
– orthoaluminates 372
Lead
– bromide 158
– tin selenide 172
Lutetium
– orthoaluminate 372
Lysozyme 89

Magnesium
– silicate 327
Manganese
– chloride, tetrahydrate 332
Melt growth technique
– by Bridgman–Stockbarger method
– – of cadmium telluride 259
– – of garnets 372
– – of lead bromide 158
– – of organic crystals for nonlinear optical material 309
– – of orthoaluminates 372
– – of II–VI compounds 6
– – theory of 158
– by Czochralski method
– – of bismuth germanate 67
– – of calcium strontium gallate niobate 54
– – of copper 351
– – of germanium 351
– – of germanium silicon 1
– – of magnesium silicate 327
– – of silicon 37, 197, 225, 351, 357
– – theory of 147, 197, 271, 286
– by floating zone method
– – of silicon 266
– – of yttrium barium cuprate 302
– – theory of 266
Mercury
– cadmium telluride 6, 247
– manganese telluride 211
Microgravity, growth under
– of silicon, by floating zone technique 266
– of yttrium barium cuprate 302
Monte Carlo simulation
– of fcc crystal growth 129
Morphological stability
– of binary alloy 134
– of tellurium–selenium–iodine 120

Nonlinear optics, crystals for
– organic material 309
Nucleation
– of cluster 104
Numbers
– Grashof 67
– Prandtl 67
– Rayleigh 147
– Reynolds 67, 197
– Rossby 197
– Rossby, thermal 197
– Taylor 197

Organic material 309
Orthoaluminates 372

Paraffins 179
Proteins
– enzyme 95
Purification of materials
– of organic material 309

Quantum wells, see Device characterization

Rare earth
– aluminum garnets 372
– rhombic aluminates 372
Rochelle salt 332

Silicon 19, 37, 197, 225, 351, 357
Sodium
– chlorate 336
– chloride 104
Solid growth technique
– by recrystallization
– – of tellurium–selenium–iodine 120
– by strain anneal
– – theory of 134

Solution growth technique
– by flux method
– – of bismuth strontium calcium cuprate 86
– – of bismuth strontium calcium cuprate, rare earth substituted 81
– – of yttrium barium cuprate 190
– by hydrothermal growth
– – of barium oxide–iron(III) oxide 47
– by low temperature method
– – of lysozyme 89
– – of manganese chloride, tetrahydrate 332
– – of protein enzyme 95
– – of Rochelle salt 332
– – of sodium chlorate 336
– theory of cluster formation 104
Statistical mechanics, molecular theory
– of roughening transition 179
Stefan problem or moving boundary problem
– of binary alloy 134
– of binary mixture 113
Superconductivity materials, high T_c
– bulk
– – of BSCCO 86
– – of BSCCO, rare earth substituted 81
– – of YBCO 302
– – of YBCO, tantalum doped 190
– substrate application for 54

Tellurium
– selenium–iodine 120
Thermolysin 95
Thin film growth, epitaxy
– by liquid phase electroepitaxy
– – of gallium antimonide 206
– by liquid phase epitaxy
– – of indium gallium arsenide 238
– – of indium gallium arsenide phosphide 251
– – of mercury cadmium telluride 6
– by migration enhanced epitaxy
– – of silicon 19
– by molecular beam epitaxy
– – of cobalt 363
– – of indium phosphide 19
– by vapor phase epitaxy
– – through metalorganic chemical vapor deposition
– – – of aluminum gallium arsenide 231, 344
– – – of bismuth titanium oxide 319
– – – of gallium arsenide 231, 344
– – – of mercury cadmium telluride 247
– – – of mercury manganese telluride 211
– – through metalorganic chemical vapor deposition, plasma-assisted
– – – of indium phosphide 15
Thulium
– orthoaluminate 372
Two–six (II–VI) compounds 6

Vapor growth technique
– by evaporation and condensation
– – of cadmium telluride 27
– – of lead tin selenide 172

Ytterbium
– orthoaluminate 372
Yttrium 323
– aluminum garnet 147, 372
– orthoaluminate 372
– barium cuprate 302
